

Dog Runs and Kennels

- Depending on the age of your dog kennel will depend on the amount of organics that are present.
- The older the kennel the larger the amount of organics that will be present and the more application of ez-clean will be required.
- Upon the first application of ez-clean the kennel may smell worse than it did when you began. This is because the first application of ez-clean will eliminate the top “crusted” layer of the organics. Reapplication will be required until all the aged organics have been consumed.

Application of ez-clean

- Pick up excess organics and solids
- The initial applications of ez-clean apply 1:10 dilution to the area. Once the organics are under control the product can be diluted down to 1:64 for maintenance applications
- ez-clean can be applied multiple ways below are the two most common.
 1. Pre wet the area with water and then apply ez-clean full concentrate using a sprayer.
 2. Use a mixer/diffuser that attaches to the end of a garden hose. Turn the dial to the correct dilution and apply to the areal
- Leave area to dry completely, once ez-clean is dry it is life cycle is complete

Additional Information

- The run is immediately safe for your pet to go back on it.
- Once diluted the product will only stay alive for two weeks so only mix what you need.
- Think that moisture is the highway in which ez-clean travels so make sure the area is moist if you want ez-clean to travel and find the organics.

ez-clean uses

- dog run and kennels
- decks
- fences
- barns
- stock trailers
- vehicles
- mattress stains
- medical scrubs
- organic carpet stains
- organic upholstery stains
- garbage cans
- sport equipment
- mildew smell
